

# WATERMASTER®

*The unprecedented single point battery watering system*

**WATERMASTER®** is a radical development in the field of single point battery watering for motive power batteries

**WATERMASTER®** is a world-wide patented design

**WATERMASTER®** saves time & money time after time at every top-up

**WATERMASTER®** means convenient and hassle-free watering by minimizing manual intervention

**WATERMASTER®** has become the industrial standard in America and Australia

## enormous savings

- 75% cheaper than any alternative
- and at every top-up yet again 75% saving on labour costs
- never any repair costs on filler cap or battery

## trouble-free robust construction

- unique design with no array of vulnerable floats
- only cap that lasts 3 battery lives
- can also be fitted to already in-use batteries
- highly resilient – stands up well to arduous handling
- shut-off process involves no moving parts

## fits on all makes of battery

- one cap fits almost all traction battery types, resulting in trouble-free ordering
- can easily be transferred from old to new batteries
- works well in extreme temperatures, such as freezer applications and smelting-works

## safety & environment

- safe manner of topping-up batteries – no risk of acid spillage
- explosion chain-reaction reduced by means of water buffer
- in the unlikely event of a leakage only clean demi-water is spilled
- manufactured from 100% recycleable material
